The County of San Diego's Toll Free Recycling & Household Hazardous Waste Hotline

Special thanks to I Love A Clean San Diego, the Alameda County Waste Management Authority and the Sonoma County Waste Management Agency for their assistance in developing this guide. Brochure design by Eric Noether and illustrations by Sheryl Chapman.

This guide is printed on 100% post-consumer recycled content paper with soy-based inks.

The County of San Diego Recycles It's In Our Nature!

Since 1990, San Diego County residents and businesses increased our recycling rate from 20% to more than 50%. But we can still do more!

WHY RECYCLE?

Recycling the debris generated by construction, demolition and renovation projects saves natural resources, and can improve your project's bottom line.

Natural Resources

Recycling conserves our precious – and increasingly rare – raw materials, such as concrete, dirt, trees, metals and water. If you have to demolish a structure, consider SALVAGE and DECONSTRUCTION to preserve fixtures, concrete and wallboard.

Landfill Space

As the region grows, recycling construction and demolition materials is vital to preserving landfill space. Most construction debris found in landfills could have been recycled.

Water and Energy

Producing products from recycled material uses up to 50% less energy and water than the alternative. You can also conserve by choosing water and energy efficient appliances for remodels and new home construction— lowering operating costs over the life of the building.

Pollution

Less energy is used to make the same products from recycled materials than from virgin material—that means less air and water pollution!

Jobs

Recycling creates long-term jobs and improves the economy. Each 10 thousand tons of debris generated creates 10 jobs at a materials recovery facility and creates 25 jobs at a recycling processor. In comparison, landfilling the material creates only one job.

It's the Law

State law requires all new construction projects to recycle at least 50% of debris generated. Many local jurisdictions, including the County of San Diego, have Construction and Demolition Recycling requirements. Recycling requirements vary by jurisdiction, but materials commonly prohibited from going in the trash include: ASPHALT, CARDBOARD, CONCRETE, DIRT, ROCK, SAND and BRUSH.

WHAT CONSTRUCTION MATERIALS ARE IN THE LANDFILL?

Stop Waste...

HAVE A WASTE MANAGEMENT PLAN

Before you start, identify what materials are used in your project. Work with your contractor, hauler or recycler to determine what materials should be separated for recycling. Download a sample Debris Management Plan from our website: www.sdcounty.ca.gov/dpw/recycling/cdhome.html

Tips for a successful plan:

- ✓ Appoint an onsite recycling supervisor.
- ✓ Require subcontractors to participate in your recycling program.
- ✓ Consider deconstruction and salvage.
- ✓ Sort materials by type. Place signs on bins indicating recyclable materials.
- ✓ Educate all workers on the project to keep plastic bags and film, caulking tubes and other trash out of recycling bins.
- ✓ Place recycling bins in a location that will prevent contamination or misuse by the public. Even a small amount of trash can make the entire load unacceptable for recycling.

Clean Loads Save You \$\$!

Check with your hauler and recycler to be sure you know what clean loads are.

DECONSTRUCTION is the careful removal of materials from structures to recover valuable building resources. Deconstructed materials can be sold to salvage companies, which eliminates landfill disposal fees.

Before It Starts

REDUCE WASTE... USE LESS!

- Be precise! Measure twice, cut once.
- Use standard size materials.
- Choose durable rather than disposable products and tools.
- Use Green Building and energy efficient practices and products for construction, operation and maintenance.

REUSE MATERIALS

- Consider remodeling or retrofitting existing buildings for new use.
- Instead of demolition, consider salvage and deconstruction. Some companies even offer tax deductions for salvaged materials to offset the cost of deconstruction.
- List salvaged items on websites (i.e. freecycle or Craigslist) or donate to businesses that resell used building materials. Tax deductions may be available for donations.
- Use salvaged products or products made from recycled materials.

RECYCLING SAVES MONEY!

- Haulers generally charge less for recycling metal, concrete and clean wood than for normal trash collection.
- You can also use a scrap metal dealer or concrete facility for recycling collection.
- By diverting debris from trash bins into recycling bins, you can reduce your trash bin size and the number of weekly collections.
- Extra time spent separating materials usually costs less than landfill fees.

SALVAGE is using and saving reusable items, including doors, hardware, appliances and fixtures (preferably before construction begins to avoid damaging anything). These items are often rare like old-growth lumber or antique fixtures.

Recycling & Proper Disposal: It's the law.

RECYCLING CONSTRUCTION MATERIAL

Unincorporated County of San Diego Construction and Demolition Recycling Ordinance:

The County requires debris from construction and demolition projects be diverted away from landfills. The Ordinance requires that 90% of inert material and 70% of all other material must be recycled.

To comply with the Ordinance, applicants must submit a Debris Management Plan and a fully refundable Performance Guarantee prior to building permit issuance.

Does the Construction and Demolition Recycling Ordinance apply to my project?

This Ordinance applies to construction, demolition or renovation projects, 40,000 square feet or greater in the unincorporated County of San Diego. If you are building a phased residential or commercial development, the 40,000 square feet applies to the total proposed build-out of the project. All tract developments are subject to ordinance compliance.

What is required under the Ordinance?

Each qualifying project is required to:

1. Complete a Debris Management Plan.
2. Submit a Performance Guarantee.
3. Track trash and recycling loads in a daily log at the job site.
4. Submit a Final Debris Management Report as a request for refund within 180 days of the Certificate of Occupancy. This report must be accompanied by all recycling and debris receipts from the project.

For information on the County's Ordinance, visit:
www.sdcounty.ca.gov/dpw/recycling/cdhome.html

STATE LAW: CALGREEN STANDARDS

Effective January 2011, CalGreen became part of the State of California's new building standards.

- Projects of all sizes must divert at least 50% of waste from new construction projects. CalGreen requires builders/owners to complete a waste management plan. This plan should be developed before construction begins. Project managers should use the project's planning phase to estimate materials that will be generated and identify diversion strategies for those materials.
- The code applies to new construction of buildings, including low-rise residential and most non-residential occupancies. "Low-rise residential" is defined as three stories or less. The code does not apply to demolition projects.

Contact List For Other Jurisdictions

For a list of contacts for other jurisdictions in the County of San Diego:

Hazardous materials:

www.sdcounty.ca.gov/deh/hazmat/pdf/chd_hhw_contact.pdf

Recycling:

www.sdcounty.ca.gov/dpw/recycling/Files/Contacts_by_Jurisdiction.pdf

Hazardous Waste Disposal

Hazardous waste cannot be disposed of in the trash.

There are affordable, safe and legal disposal options for hazardous waste for residents and businesses throughout San Diego County. Residents should call **1-877-R-1-EARTH**. Businesses should call the Hazardous Waste Duty Desk at **858-505-6680** or toll free at

1-800-253-9933.

Learn More, Do More.

BUILD SMARTER... BUILD GREEN

Each of us has a stake in preventing pollution and preserving resources for future generations. Buildings have a tremendous impact on the environment, both during construction and throughout their operation.

“Green” building is a strategy of land-use, building design and construction activities that reduce environmental impacts. Benefits of building green include reduced energy use, protection of ecosystems and improved occupant health. Green building reduces emissions and dependence on natural resources such as trees, oil and minerals. For more information go to:

www.bsc.ca.gov/home/calgreen.aspx

KEEP OUR WATER CLEAN

The County's Watershed Protection Ordinance prohibits the discharge, either directly or indirectly, of anything but rainwater to storm drains or water bodies. Best Management Practices help prevent illegal discharges of debris (including soil) to nearby storm drains, creeks, rivers and the ocean.

STORMWATER BEST MANAGEMENT PRACTICES FOR CONSTRUCTION AND DEMOLITION

- When possible, schedule demolition, grading and excavation activities for dry weather.
- Designate staging areas for materials, including soils, away from storm drains.
- Keep materials covered with a tarp or plastic sheeting to shield them from wind or rain and to prevent run-off.
- Use dry clean up methods, such as sweeping and vacuuming whenever possible.
- Never bury waste. Contact your hauler for proper disposal of wastes and recyclable materials.
- Install storm drain inlet protection during construction.

For more information or to report stormwater pollution, call the Regional Stormwater Hotline at 1-888-846-0800 or visit www.projectcleanwater.org
